Public Notice of Application for Permit

PUBLIC NOTICE DATE: September 4, 2008
EXPIRATION DATE: September 18, 2008
REFERENCE NUMBER: POA-1986-106-M5
WATERWAY: Lynn Canal

PUBLIC NOTICE REVISION

On August 5, 2008, the Alaska District Corps of Engineers published a Public Notice for Department of the Army (DA) permit number POA-1986-106-M5, Lynn Canal, for a DA permit modification application from Yankee Cove Development, LLC. The applicant proposed to (1) place fill into waters of the United States in conjunction with constructing an extension to an existing rock breakwater to further protect a previously permitted project from the effects of heavy wave action, and (2) proposed to alter the project purpose to provide for the ability to dispense fuel from the existing floating dock, superseding Special Condition Number 2 that was issued on March 16, 1987. The public comment period for this notice closes on September 4, 2008. The project site is located within NW $\frac{1}{4}$, SE $\frac{1}{4}$ of Section 7, T. 38 S., R. 64 E., Copper River Meridian; Latitude 58.590° North, Longitude 134.901° West, Juneau C-3 Quadrangle, in Yankee Cove, Lynn Canal, Alaska.

The applicant has amended the design of the proposed breakwater extension, and now proposes to construct it in accordance with the enclosed plans (Sheets 1 through 2 of 2 dated September 2, 2008). These replace Sheets 1 through 2 of 2 dated March 18, 2008, as contained in the August 5, 2008, Public Notice. There is no appreciable change to its overall footprint size. Changes to the design would be:

1. A larger opening between the existing breakwater and the final configuration of the proposed breakwater extension;
2. A steeper slope on the upper part of the structure and a gentler slope on the lower part of the structure on the Lynn Canal side of the proposed breakwater extension;
3. Its composition, per this amended design, would consist of an inner core of 18" minus shot rock (4,800 cubic yards), covered by a layer of 24" minus shot rock (3,800 cubic yards), with an armoring of 60" armor rock on the seaward facing side of the proposed breakwater (3,400 cubic yards); and,

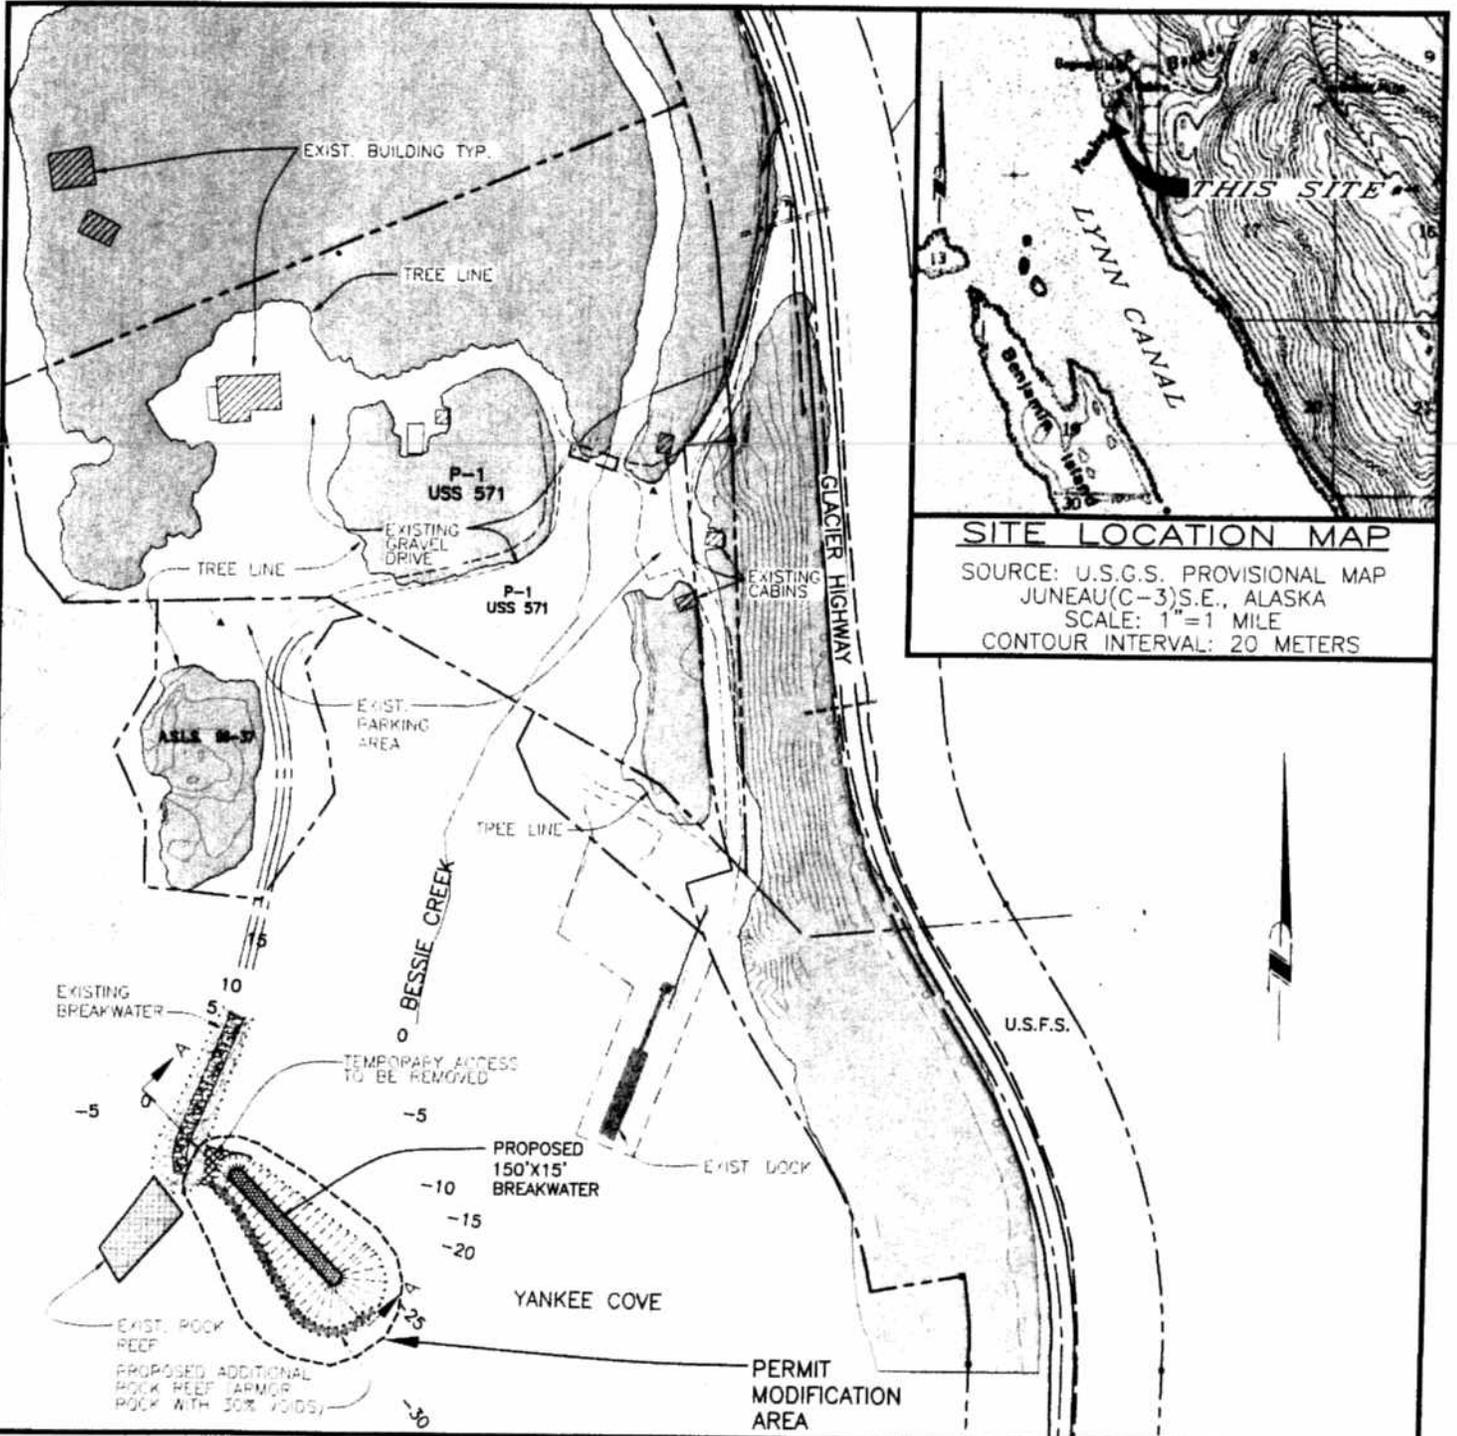

4. The proposed breakwater centerline would be moved slightly toward the northeast several feet.

ADDITIONAL INFORMATION: This amended design, resulting from recent coordination between the applicant and the National Marine Fisheries Service, is proposed as a means of maximizing habitat for herring spawning, and alleviating impediments to fish fry escapement from Bessie Creek. Construction access would result in the placement of fill that would be ultimately removed at project completion to create the notch between the two breakwaters. Fill removed at project completion would be placed in an upland location.

For additional information, please contact Mr. Marion Hobbs, Post Office Box 210447, Auke Bay, Alaska 99821-0447, or call (907) 789-5856.

All other information contained in the previous notice remains the same. Please bring this announcement to the attention of anyone you know who is or may be interested. Please contact Richard Jackson at (907) 790-4490, or by email at richard.g.jackson@usace.army.mil if further information is desired concerning this notice.
