Community Information
Nondalton (non-DOLL-tun), population 196, is in southwestern Alaska at the head of the Newhalen River (Nughilvetnu), on the west shore of Six Mile Lake, between Lake Clark and Iliamna Lake. It is 190 miles southwest of Anchorage. The community is incorporated as a 2nd class city in the Lake and Peninsula Borough. The community is accessible only by air and water.

Description of Erosion Problem
Ice conditions can cause E Street, D Street, and Main Street, the primary access road to the airport, to wash out in the spring and fall. Ice build-up and related runoff from streams flowing through the Nondalton area are the biggest erosion problems facing the community.

Potential Damages
Culverts were installed to prevent erosion of streets, but the culverts were not large enough in some areas. Additional measures are needed to correct the local drainage problems.

Photos and Diagrams
No photos were provided by community or other sources. See attached diagram showing linear extent of erosion.
