**B. REQUIRED ADDITIONAL COMMENTS TO SUPPORT JD. EXPLAIN RATIONALE FOR DETERMINATION THAT THE REVIEW AREA ONLY INCLUDES DRY LAND:** Although the soil map suggests the area is mostly hydric, it was developed at a scale that could not account for the numerous small upland inclusions within the river valley. There is no NWI coverage in this area. The majority of Arctic Village residences and infrastructure was built upon these upland areas between the many ponds and wetlands. Aerial imagery indicates the project is located in uplands. Additionally, a site visit by a Certified Forester identified white spruce (*Picea glauca*) as the dominant vegetation, further supporting the upland determination. Several other JD's for residences reported the areas as uplands.

<sup>1</sup> This form is for use only in recording approved JDs involving dry land. It extracts the relevant elements of the longer approved JD form in use since 2007 for aquatic areas and adds no new fields.
