B. REQUIRED ADDITIONAL COMMENTS TO SUPPORT JD. EXPLAIN RATIONALE FOR DETERMINATION THAT THE REVIEW AREA ONLY INCLUDES DRY LAND: Applicant provided photos as well as aerial imagery shows that paper birch (FACU), and white spruce (FACU) occupy the majority of the vegetation present on the property. Willows and grasses are present in areas that have been previously land cleared. Soils typically found in the Yukon River Basin and that coincide with the topography and vegetation displayed here are Pregellic Cryochrepts. Pregellic Cryochrepts are gravelly in nature, have deep permafrost tables, are well drained, and non-hydric.

¹ This form is for use only in recording approved JDs involving dry land. It extracts the relevant elements of the longer approved JD form in use since 2007 for aquatic areas and adds no new fields.
