☐Relatively permanent w	aters ² (RPWs)) that flow directly or indirectly into	ΓNWs
□Non-RPWs that flow di	rectly or indire	ectly into TNWs	
	ng RPWs that	flow directly or indirectly into TNW	⁷ s
-	-	abutting RPWs that flow directly or i	
_	-	flow directly or indirectly into TNWs	-
☐Impoundments of jurisd		<u> </u>	
•		s, including isolated wetlands	

 $^{^{1}}$ Boxes checked below shall be supported by completing the appropriate sections in Section III below.

² For purposes of this form an RPW is defined as a tributary that is not a TNW and that typically flows year-round or has continuous flow at least "seasonally" (e.g., typically 3 months.

b. Identify (estimate) size of waters of the U.S. in the review area:

Non-wetland waters: # linear feet: # width (ft) and/or # acres. Wetlands: # acres.

Limits (boundaries) of jurisdiction based on: CHOOSE: Not Applicable/1987 Delineation

Manual/Established by the OHWM/Established by Outer Continental Shelf Limits/Seaward Limit of the Territorial Seas/Within 3-Mile Baseline/Established by Mean High Water/Established by Corps Navigation Study/Not Established at This Time

Elevation of established OHWM (if known): TEXT

2. Non-regulated waters/wetlands (check if applicable):³

 \square Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined to be not jurisdictional.

Explain: TEXT

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: TEXT

Summarize rationale supporting determination: TEXT

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent": TEXT

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY):

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under *Rapanos* have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a tributary with perennial flow, skip to Section III.D.4.

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

³ Supporting documentation is presented in Section III F.

A Note that the Instructional Guidebook contains additional information regarding swales, ditches, washes, and erosional features generally and in the arid West.

(i) General Area Conditions: Watershed size: TEXT	
Drainage area: TEXT	
Average annual rainfall: # inches	
Average annual snowfall: # inches

Subsurface flow: CHOOSE: Yes/No/Unknown Explain find	ings: IEXT		

2.

⁶ A natural or man-made discontinuity in the OHWM does not necessarily server jurisdiction (e.g., where the stream temporarily flows underground, or where the OHWM has been removed by development or agricultural practices). Where there is a break in the OHWM that is unrelated to the waterbody's flow regime (e.g., flow over a rock outcrop or through a culvert), the agencies will look for indicators of flow above and below the break.

⁷ Ibid.

	□Dye (or other) test performed: TEXT
	(c) Wetland Adjacency Determination with Non-TNW:
	☐Directly abutting
	□Not directly abutting
	☐ Discrete wetland hydrologic connection. Explain: TEXT

	☐ Federally Listed species. Explain findings: TEXT
	□Fish/spawn areas. Explain findings: TEXT
	Other environmentally-sensitive species. Explain findings: TEXT
	☐ Aquatic/wildlife diversity. Explain findings: TEXT
3.	Characteristics of all wetlands adjacent to the tributary (if any)
	All wetland(s) being considered in the cumulative analysis: CHOOSE: Enter # or 30 or more
	Approximately (#) acres in total are being considered in the cumulative analysis.
	For each wetland, specify the following:

Directly abuts? (Y/N)	Size (in acres)	Directly abuts? (Y/N)	Size (in acres)
Y/N	#	Y/N	#
Y/N	#	Y/N	#
Y/N	#	Y/N	#
Y/N	#	Y/N	#

Summarize overall biological, chemical and physical functions being performed: TEXT

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

- Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNWs. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to Section III.D: TEXT
- Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or
 indirectly into TNWs. Explain findings of presence or absence of significant nexus below, based on the tributary in
 combination with all of its adjacent wetlands, then go to Section III.D: TEXT
- 3. **Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW.** Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D: TEXT

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY):

1.	TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area: □TNWs: # linear feet # width (ft), Or, # acres.
	☐ Wetlands adjacent to TNWs: # acres.
	□ wettailus adjacent to 11vws. # acres.
2.	RPWs that flow directly or indirectly into TNWs.
	☑ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and rationale indicating that tributary is perennial: Based on USGS Topo map that shows that Sheep creek as second order tributary with an upslope basin area sufficient to have year round flow.
	☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: TEXT
	Provide estimates for jurisdictional waters in the review area (check all that apply):
	☐ Tributary waters: # linear feet # width (ft).
	☐ Other non-wetland waters: # acres.
	Identify type(s) of waters: TEXT
3.	Non-RPWs ⁸ that flow directly or indirectly into TNWs.
	☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has a significant nexus with
	a TNW is jurisdictional. Data supporting this conclusion is provided at Section III.C.
	Provide estimates for jurisdictional waters within the review area (check all that apply):
	☐ Tributary waters: # linear feet # width (ft).
	☐ Other non-wetland waters: # acres.
	Identify type(s) of waters: TEXT
e Fo	potnote #3.

	nds directly abutting an RPW that flow directly or indirectly into TNWs.
⊔Wet	lands directly abut RPW and thus are jurisdictional as adjacent wetlands.
abuttin Sheep	⊠Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale ing that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly g an RPW: Aerial photos and USFWS NWI maps show that project area wetlands are continues and abutting to Creek. Trilby Avenue bisects the wetland, however a cross drainage culvert was in place at a low spot in the road d water at the outlet and was connected to wetlands on either side of the road.
that ha	d water at the outlet and was connected to wettands on entire side of the road.
	☐Wetlands directly abutting an RPW where tributaries typically flow "seasonally." Provide data indicating butary is seasonal in Section III.B and rationale in Section III.D.2, above. Provide rationale indicating that wetland only abutting an RPW: TEXT
Prov	vide acreage estimates for jurisdictional wetlands in the review area: # acres.
□Wet adjace	ds adjacent to but not directly abutting an RPW that flow directly or indirectly into TNWs. lands that do not directly abut an RPW, but when considered in combination with the tributary to which they are not and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data ting this conclusion is provided at Section III.C.
Provid	e acreage estimates for jurisdictional wetlands in the review area: # acres.
6. Wetlar	ads adjacent to non-RPWs that flow directly or indirectly into TNWs.
	lands adjacent to such waters, and have when considered in combination with the tributary to which they are
adjace	nt and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data ting this conclusion is provided at Section III.C.
Provid	e estimates for jurisdictional wetlands in the review area: # acres.
7. Impou	ndments of jurisdictional waters. ⁹
	eneral rule, the impoundment of a jurisdictional tributary remains jurisdictional.
□Den	nonstrate that impoundment was created from "waters of the U.S.," or
□Den	nonstrate that water meets the criteria for one of the categories presented above (1-6), or
□Den	nonstrate that water is isolated with a nexus to commerce (see E below).
DEGRADAT	CD [INTERSTATE OR INTRA-STATE] WATERS, INCLUDING ISOLATED WETLANDS, THE USE, ION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE, INCLUDING WATERS (CHECK ALL THAT APPLY): 10
□which are o	r could be used by interstate or foreign travelers for recreational or other purposes.
☐from which	fish or shellfish are or could be taken and sold in interstate or foreign commerce.
□which are o	r could be used for industrial purposes by industries in interstate commerce.
