To whom it may concern:

The land staked out by Sitnasauk Native corporation as our pit area encompasses an area along the Nome Council road(south side) that is 1600 feet long East to West by 950 feet Long northward, then 1000 ft on the north side turning south 950 ft to the beginning point. The nearest other land owner is over a mile away up Hastings Creek (north) at a mining claim.

This property at its lowest point is 24 feet above sea level, no part of this project impacts the ocean or any navigable waters.

Our erosion control measures, outlined in our SWPPP plan, is to leave a buffer zone or natural undisturbed vegetation around the areas of disturbed soils. the minimum State of Alaska requirement for this buffer is 25 ft and we have left at least 100 ft in all areas with the exception of the entrance to the pit were we built and maintained a series of settling ponds to retain any silt coming out of the pit face. This buffer zone catches and holds all silt from entering into the waters of Hastings creek.

This worked to great success this last season through record setting rainfalls and several 100 year rain fall events. Our goal is to go the extra mile to ensure a safe and acceptable project for all interested parties.

After we are done extracting gravel we will remediate the disturbed areas as directed by the land owner by smoothing out the over burden piles and seeding the slopes to prevent possible erosion using the most practical BMP's to accomplish this.

If you have any further questions please let us know as this is a very important project to the State of Alaska , Sitnasauk Native Corporation, Bering Straits Native Corporation, the people of the villages of Solomon and Council and us.
